TAT

Attached is a draft of a ~~to~~ memo
plans to send to the DCI.

While it is not meant to spot light security
it seems to do so.

Harry has legitimate concerns. I don't
think we can dissuade him from this
course although I may have opportunity
to recast some specifics, get him to
change some examples if you, Bill and
others think it advisable.

It would not be advisable to put Bill
in a position where he would begin raising
basic APFX issues in front of the DCI
at this late date - Nonetheless, Bill shouldn't
walk into this blindly.

Do you think it advisable to put this
before the OS senior officers, collect their
advice and have Bill ready with solid
proposals when Harry sends the paper down
for official coordination?
